AMMUNITION

PPU SINTER BULLET OF FRANGIBLE AMMUNITION

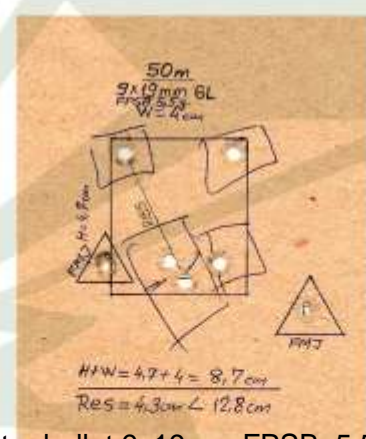

Everything is conventional and even better, only there are no bullet, no hole and no injuries due to fragmenting after the bullet impacts into steel plate target.

PPU Sinter bullet after impact into steel plate target

PPU SINTER BULLET OF FRANGIBLE AMMUNITION

Design and technology of PPU- sinter bullet and optimized cartridge is new alternative to conventional FMJ lead bullet.

It fulfils environmental conditions and reduces danger. After impacts in obstacle harder than bullet itself, this bullet fragments easily. Its main characteristics are reduced rejection risk bullet fragments ricochet, low level of impact into conventional bullet holding systems, reduced operational expenses on the range and easy transfer from training to practical usage.

NEW!

- lead free bullet
- frangible bullet
- reduced danger
- environmental protection
- training and other usage on open range

RPSB

ECOLOGY LINE - EL

PPU Ecology Line of frangible lead free ammunition fulfils environmental conditions and reduces danger; it is intended for all trainings and other usage on the open range.

The same recoil characteristic and reliable functioning make PPU sinter bullet RPSB (Round Point Sinter Bullet) and SPSB (Spitz Point Sinter Bullet) the right choice for shooters' trainings, other practices and reduced operational expenses on the range.

NEW!

- lead free bullet and primer
- frangible bullet
- reduced danger
- 100% environmental protection
- training and other usage on closed shooting ranges

FPSB

GREEN LINE - GL

PPU Green Line of frangible ammunition, 100% lead free bullet and primer, has Flat Point (FP), fulfils all environmental conditions and reduces danger in all trainings and other usage on closed range.

The same feeling of recoil and proper functioning make PPU- Sinter bullet FPSB (Flat Point Sinter Bullet) the right choice for training and easy transfer to practice usage.

NEW!

- lead free bullet and primer
- frangible bullet
- reduced danger
- 100% environmental protection
- service usage in the field

HPSB

DUTY LINE - DL

PPU Duty Line of frangible ammunition with 100% lead free bullet and primer has Hollow Point (HP) and performances demanded for the duty frangible ammunition without large penetration. Shots that miss the target will disintegrate while impacting into the object harder than bullet itself, which reduces danger.

These characteristics make PPU- Sinter bullet HPSB (Hollow Point Sinter Bullet) the obvious choice for duty frangible ammunition.
