RETRACTOR

AS Retractor System is highly effective, multi applicable, modern and absolutely safe system which enables surgeon's approach to organ that is to be operated.

It is mounted on a standard supporting lathes of operating table with two supporting pillars with a clamp, the system is set on supporting lathe over a sterile cover, which completely separates sterile retractor from unsterile elements of operating table.

AS Retractor System consists of two supporting pillars, four angle supports, eight lopatica/shovel/spade/ supports of different lengths and necessary number of couplings which enables setting of all available elements into required position.

The system is made of best quality stainless chromium-nickel plated steel. Surface hardness of all elements is increased by hard chromium plating which prevents damages on sliding surfaces.

Many new elements could be mounted on basic type of AS Retractor System, expanding possibilities of its application.
